

Phase 0: Project Proposal

TEAM 2

1. System Overview

System Name: STARTMED Telemedicine.

Chosen Idea: A specialized Telemedicine HCMS designed to automate remote patient consultations, electronic health records, and digital billing.

2. Technology Stack & Tools

Component	Technology Selection
Frontend	React.js (for a responsive, dynamic Patient Portal)
Backend	Python
Database	MYSQL
Authentication	JSON Web Tokens (JWT) (for role-based access control)
Communication	WebRTC (for real-time video/audio consultations)

3. Team Positions & Task Division

Project Manager: Oversees timeline, documentation, and system design (ER Diagrams) -----> **Ahmed**

Frontend Developer: Responsible for the Patient Portal, registration UI, and profile management -----> **Israa**

Backend Developer: Responsible for User Authentication, role-based access, and server-side API logic -----> **Yousef**

Database Administrator: Designs the Database Schema, ER Diagram, and manages medical records -----> **Seif**

Full-Stack/Integration Lead: Handles Appointment Management and billing/payment processing integration -----> **Omar**

4. System Features (Summary)

The system will implement the following core functionalities as required:

Authentication: Secure login for Admin, Clinic Staff, and Patients.

Patient Portal: Management of medical history, prescriptions, and billing.

Appointment Management: Scheduling and managing digital consultation slots.
